Acknowledgements

This publication was developed by the Federal Privacy Council's Privacy Risk Management Working Group, in collaboration with a team of information security officials from the Chief Information Security Officer Council. The councils would like to thank the participants, listed below, who made this publication possible. The co-chairs of the working group would also like to thank the following individuals for their support: Kirsten Moncada, Joo Chung, Chris DeRusha, Steven Hernandez, Naomi Lefkowitz, Melody Fan, and Sari Wilson.

Co-Chairs	Charles Cutshall (CFTC); Kevin Herms (ED)
Privacy Co-Leads	Shannon Dahn (FDIC); Porter Davis IV (HUD); Rowena Dufford (BSEE); Elizabeth Koran (HHS); Joy Liu (DOI); Fon Muttamara (MSPB); Latosha Pratt (VA); Shannon Riley (DHS); Jeanette Whiten (DOD)
Security Co-Leads	Nickole Arbuckle (OMB); Chad Bahan (PBGC); Ralph Jones (Treasury); Servio Medina (DOD); Andrea Simpson (FCC); Joseph Stenaka (VA)
Team Members	George Apetse (Treasury); Kaitlin Boeckl (NIST); Colleen Canovas (USDA); Shannan Catalano (ED); Dustin Close (HHS); Tiffany Daniel (DOC); Harry Doyle (DOD); Donald Free (DOI); Scott Gibbons (DOL); Dylan Gilbert (NIST); Ericka Gilbert (FDIC); Karyn Gorman (DOT); Pam Gosier-Cox (DOT); Eric Gray (ED); Erenay Hadjigerogalis (State); Qamar Hasan (GSA); Ngoc-Khanh Hoang (DOT); Stayce Hoult (NASA); Christina Jones-Mims (State); Rena Kim (NCUA); Elizabeth LaGreca (DHS); Sarah McKellar (FTC); Bahareh Moradi (FCC); Dana Myers (DOD); Margarida Nighswander (DOL); Jarell Oshodi (HHS); Richard Phillips (IRS); James Piyavansuthi (MSPB); Marcela Souaya (CFTC); Regina Stabile (HHS); Leah Swicegood (IRS); Michael Terry (DOJ); Justin Ubert (DOT); Donald Walden (IRS); Miles Windsor (VA)

Abstract

This publication serves as a guide to help Federal information security programs and Federal privacy programs understand the level of collaboration that may be appropriate during the implementation step of the National Institute of Standards and Technology (NIST) Risk Management Framework. For each control and control enhancement listed in NIST Special Publication (SP) 800-53 Revision 5, *Security and Privacy Controls for Information Systems and Organizations*, this publication provides a Collaboration Index value that denotes the level of collaboration that may be appropriate. For ease of use and to allow for increased flexibility, this publication includes both a three-point scale and a five-point scale.

Background

During a preliminary draft of NIST SP 800-53 Rev. 5, OMB and NIST piloted the development of a Collaboration Index for security and privacy controls. The Collaboration Index was designed to provide guidance on the level of collaboration that may be appropriate between Federal information security programs and Federal privacy programs during the implementation step of the NIST Risk Management Framework. However, the Collaboration Index was not completed or incorporated into the final version of NIST SP 800-53 Rev. 5 that was published in September 2020.

In 2021, the Federal Privacy Council established the Privacy Risk Management Working Group to provide a forum for agency privacy professionals to identify and develop best practices for managing privacy risks. The working group, in concert with the leadership of the Federal Privacy Council, recognized that there was a lack of guidance for agencies on the collaboration between information security programs and privacy programs when implementing controls. As a result, the working group decided to complete the Collaboration Index, in concert with partners from OMB, NIST, and the Chief Information Security Officer (CISO) Council.

Over the next year, the working group formed a series of sprint teams led by privacy co-leads that systematically reviewed each of the controls and control enhancements in the NIST SP 800-53 Rev. 5 control catalog. The sprint teams proposed Collaboration Index values using the same basic three-point and five-point scales that OMB and NIST had piloted during the development of NIST SP 800-53 Rev. 5 (see Collaboration Index Key). The proposed Collaboration Index values were then reviewed by a team of co-leads from the information security community that were selected through a solicitation from the CISO Council. Finally, the privacy co-leads engaged in a series of collaborative meetings with the information security co-leads to reach consensus on Collaboration Index values for each of the controls and control enhancements in NIST SP 800-53 Rev. 5.

This publication represents a milestone in the partnership between the Federal privacy and Federal information security communities. The yearlong process to develop this publication epitomized the value of collaboration that the publication itself is intended to promote. The Federal Privacy Council and the CISO Council hope that privacy and information security officials find this to be a useful document that elevates the partnership between the two communities and promotes our shared objectives of fostering secure and privacy-protective information systems across the Federal Government.

Should you have questions or comments about this publication, you may contact the Federal Privacy Council at privacy.council@gsa.gov.

The Collaboration Index and Privacy Implementation Considerations Column in CNSSI 1253

At the same time the Federal Privacy Council and the Chief Information Security Officer Council were working to develop this Collaboration Index for Security and Privacy Controls, a separate working group under the Committee on National Security Systems was working to update the Committee on National Security Systems Instruction (CNSSI) 1253, *Categorization and Control Selection for National Security Systems*.

CNSSI 1253 provides all Federal Government departments, agencies, bureaus, and offices with guidance on the first two steps of the Risk Management Framework (RMF), Categorize and Select, for national security systems (NSS). Included in the update to CNSSI 1253 is a Privacy Implementation Considerations column that identifies controls that are not included in the NSS privacy control baseline, but the implementation of which may introduce privacy risks and, therefore, if selected to address security objectives, require coordination with an agency's privacy program.

The Collaboration Index for Security and Privacy Controls provided in this publication has a different scope and purpose from the Privacy Implementation Considerations column in CNSSI 1253. The Collaboration Index for Security and Privacy Controls is not specific to NSS and provides general guidance on the level of collaboration that may be appropriate between information security programs and privacy programs during the implementation step of the RMF for all information security and privacy controls.

How to Use the Collaboration Index

This publication may be used as a guide to help Federal information security programs and Federal privacy programs understand the level of collaboration that may be appropriate during the implementation step of the NIST Risk Management Framework. This publication does not establish or modify any requirements in law, regulation, or policy. The Collaboration Index values provided in this document represent a starting point to encourage discussion between information security and privacy officials within each agency. Agencies are expected and encouraged to deviate from the levels of collaboration envisioned in this document when necessary to account for divergent needs, missions, structures, and authorities. Agencies should consult with their leadership, legal counsel, and technical experts to determine the appropriate processes for implementing security and privacy controls.

Collaboration Index Key

Collaboration Color Key				
	S	SP	P	
S	Sp	SP	Ps	P

5-GRADIENT SCALE		3-GRADIENT SCALE	
S	Controls are primarily implemented by security programs – minimal collaboration needed between security and privacy programs.	S	Security programs have primary responsibility for implementation – minimal collaboration needed between security and privacy programs.
Sp	Controls are generally implemented by security programs – moderate collaboration needed between security and privacy programs.		
SP	Controls are implemented by security and privacy programs – full collaboration needed between security and privacy programs.	SP	Security and privacy programs both have responsibilities for implementation – more than minimal collaboration is needed between security and privacy programs.
Ps	Controls are generally implemented by privacy programs – moderate collaboration needed between security and privacy programs.	P	Privacy programs have primary responsibility for implementation – minimal collaboration needed between security and privacy programs.
P	Controls are primarily implemented by privacy programs – minimal collaboration needed between security and privacy programs.		

This publication provides Collaboration Index values for each of the controls and control enhancements in NIST SP 800-53 Rev. 5. The values are provided using two different scales – a 5-gradient scale and a 3-gradient scale. The two scales were created by OMB and NIST during the development of a preliminary draft of NIST SP 800-53 Rev. 5. The only difference between the two scales is the level of resolution and granularity provided. The 5-gradient scale provides additional resolution and granularity, compared to the 3-gradient scale. The values for the 3-gradient scale are derivative of the values selected for the 5-gradient scale. For example, if an “Sp” value was selected for a particular control on the 5-gradient scale, then the selection of an “S” value was required on the 3-gradient scale.

In addition to the Collaboration Index values, this publication also uses a scheme of color coding to serve as a visual cue to illustrate the value for each control. The color coding is only intended to reinforce the underlying Collaboration Index value for each control and not to provide additional guidance.

Collaboration Index for Security and Privacy Controls

Access Control				(AC)	Model Collaboration Index Value	Privacy Control Baseline	Low Control Baseline	Moderate Control Baseline	High Control Baseline
